Q. Read the passage carefully and answer the questions given below:

The present way of teaching the blind to read and write was invented by a Frenchman called Louis Braille who became blind at the early age of three. Before this, books for the blind were written in the usual letters of the alphabet raised up by being pressed from the wrong side, so that they could be felt with the fingers. But this way was not as good as the present one. For, unless the letters were fairly large, their shapes could not be felt by the fingers.

Six dots arranged in different patterns are used in the Braille method of writing. The different letters of the English alphabet are made by changing the position of the dots.

Questions

1) Who was the inventor of the present way of teaching the blind to read and write?

Ans

2) When did Louis Braille lose his eyesight?

Ans

3) How were books for the blind written long ago?

Ans

4) What is the writing method for the blind known as?

Ans

5) How are the different letters of the English alphabet made in Braille?

Ans
