

News Letter July 2021

Another month has flown by while teaching and learning continues in our Pre-Primary section.

We are so happy to see our children from Nursery to Sr.KG doing so amazingly well in their classes. It is such a delight to see the positive progress in every child but most of all, their smiling happy faces when we meet online each day in the virtual classroom.

We are able to see how children learn to solve problems, develop reasoning, explore new material and ideas and collaborate with each other thereby strengthening their cognitive development.

Here is a brief overview of what has happened throughout the month of July:

1. 1st July 2021 : STEM Activity

Children were most excited to make fruit baskets out of newspaper and used for keeping their dried fruits in it. The baskets were decorated with different colours and designs and looked very special.

2nd July 2021 : All about Me

Children spoke about their likes and dislikes. They were very happy to express themselves. These were done through various spoken activities and drawing a portrait of themselves. Such activities develop children's communication skills, confidence and a sense of self esteem.

3. 9th July 2021: My Body and Blue Day Celebration:

Blue Day Celebration – was done through story and different craft activities. Encouraging creativity is an integral part of the way we teach at Royal Oaks.

My Body – Children learnt about parts of their body, sense organs and interesting facts about their body parts through activities, puzzle solving, videos and painting.

4. 16th July 2021 : Learning about the Water Cycle

Our children learnt about the water cycle through various science activities like pouring hot water in a jar where they observed how clouds are formed and how we get rain.

5. 17th July 2021: Parent Teacher Meeting

The very first PTM from Nursery to Sr.KG. A good interaction between teachers and parents. This was the ideal opportunity for us to work together and strengthen the bonds between school and home.

6. 22nd July 2021 : STEM Activity

Children made a toy bed out of a shoe box and a host of other innovative items. They were super excited and even prepared a cute little mattress and a pillow for their shoe box bed.

STEM lays the foundation for Scientific, Technological, Engineering and Mathematical abilities amongst our children. These activities encourage our children to think laterally and to explore different paths to innovation.

23rd July 2021: Sensory/Chef/Yellow Day

Children were excited about this celebration. They were excited to show different objects they had in yellow. It was a very happy Yellow Day Celebration.

Children learnt about the 5 Sense organs through various activities. They were happy performing these activities.

Children were very happy being little Master Chefs. They were delighted to wear their chef caps as they lemonade, a delicious sandwich and yummy banana pudding.

7. 26th to 30th July 2021 : Revision & Recap Week – Strengthening Learning

This is important as learning concepts in reading, writing and arithmetic are reinforced. This ensures that children have fully grasped these concepts and are able to apply them during their written exercises.

The Pre-Primary years are a happy blend of learning and fun.

We understand that at this level it is critical to establish a solid foundation for a child's social, emotional and overall well being.

These early years of a child's life build the basis for lifelong growth.

As the months continue, we continue to build and develop on every child's skill and ability.
